Abstract (en)
[origin: WO03041637A2] The invention concerns an improved solid pharmaceutical composition comprising a lyophilized monoclonal antibody composition that exhibits enhanced stability in the dry form and a high glass transition temperature. In accordance with the invention, a lyophilized monoclonal antibody composition is provided comprising a therapeutically active monoclonal antibody or fragment thereof in admixture with a stabilizing excipient comprised of a combination of a disaccharide and a hydroxyethyl starch. Preferably, the monoclonal antibody is abciximab.
