Abstract (en)
[origin: WO03041940A1] The invention relates to an injection moulding compounder, comprising an extruder (10), with an extruder housing (12) and at least one extruder screw (14), arranged as to rotate within the extruder housing (12), for the production of melt, an injection device (40), flow-connected, or which may be flow-connected to the outlet from the extruder (10) and a storage device (50) for the buffer storage of melt. According to the invention, the storage device (50) is connected to the extruder housing (12), before the end of the at least one extruder screw (14), in the supply direction of the extruder (10), such that melt produced in the extruder (10) is stored in the storage device (50).
