Abstract (en)

[origin: WO03053768A1] The invention concerns a motor vehicle front end comprising a support for receiving components. Said support (10) comprises at least a portion (12, 18) incorporating a fluid tank (21, 22) so as to form a single-piece assembly. For example, an upper crosspiece (12) incorporates a heat exchanger manifold (21) and a crosspiece (18) incorporates a manifold (22) of the same heat exchanger. Said heat exchanger is advantageously a cooling radiator for the motor vehicle engine.
