Abstract (en)

[origin: WO03051733A1] The invention concerns a flat lid (10) provided with an articulated neck (15) which can be lifted after partly tearing a closure seal (13) to drink the beverage contained in the can and which can be then folded down together with the seal so as to close hermetically the can to preserve the remaining part of the beverage for subsequent consumption. Said lid enables to permanently maintain both the neck and the beverage contained in the can in proper food hygiene condition.
