Abstract (en)
[origin: WO03050373A1] Locking device (10) for sliding closure member such as a door, includes an activation means (1) and two locking members to engage with frame (20). Each locking member has at least two locking elements (6, 17). One locking element (6) is engageable between the fixed closure section or the sliding closure section and the frame and the other (17) is engageable between the sliding closure section and the fixed closure section. On operation of the activation means, the locking elements (6, 17) lock the sliding closure section to both the frame and the fixed closure section.
