Abstract (en)
[origin: WO03052225A1] Door closure apparatus comprising a hinge having a first hinge plate for attachment to one upstanding side edge of a door, a second hinge plate for attachment to an upstanding side edge of a doorpost and means for enabling relative rotation between the two hinge plates; and magnetic means comprising a first element which includes a magnet and a second element which includes a keeper plate to which the magnet is attracted; one of the elements of the magnetic means being supported from the second hinge plate and the other of the elements being supported by the first hinge plate or the door, the arrangement being such that the elements of the magnetic means co-operate to or control movement of the door between its open and closed position.
