Abstract (en)
[origin: WO03052235A1] The invention concerns a shutter device for closing an opening, the shutter (1) capable of being subjected to an upward and downward movement between an opening and a closing position, said shutter (1) having substantially continuous flexible or articulated lateral edges (8, 9) moving relative to guideways (10, 11) mounted on fixed supports (12) on either side of the opening, means being provided for creating a passage, between the guideways (10, 11), which is wider than the distance between the lateral edges (8, 9) of the shutter (1) when the latter is in the opening position.
