Abstract (en)
[origin: US2005017966A1] The invention relates to a device for detecting and displaying movements, whereby the device comprises a housing and position detection means, which are placed on the housing and provided for detecting the current position data of a reference point of the device. The inventive device also comprises data processing means for processing position data detected by the position detection means, and comprises a display device, which is provided on the housing while serving to display an image consisting of detected and processed position data.
