Abstract (en)

[origin: EP1457753A1] The fire arm has superposed lower and upper guns (1,2) connected by a band (3) except on mouth of the guns. The band is fixed to the gun (1) till its mouth and is withdrawn from the gun (2) over a distance from the mouth. The gun (2) is surrounded in front by a ring (6) pushed by the bands elastic deformation and hence of the lower gun. The ring is retained in place by a base plate of a handle (10) fixed on an end of the gun (2). An independent claim is also included for a process to regulate geometry of guns in front of a firearm with two superposed guns and connected by a band.
