Abstract (en)
[origin: WO03053186A2] The invention concerns a pulling device for roller luggage designed to be drawn by a user and comprising a telescopic handle system. The telescopic tubes or guides include at their ends a U-shaped handle pivotable from an inactive position parallel to said tubes or guides to an active position inclined relative to said tubes or guides. The inclination ranges between 110 and 135 DEG . Advantageously, there is provided a system for locking and unlocking the handle in at least two pivoting positions. In one embodiment, the pivotable U-shaped handle is arranged at the ends of the telescopic tubes which house a corresponding pivot pin, the assembly forming a substantially rectangular pivoting frame.
