Abstract (en)

[origin: WO03053209A1] The invention relates to a method for detecting the energy and water consumption of dishwashers, whereby the energy/water consumption rating can be optimized for dishwashers. The amount of energy and water required to operate dishwashers comprising at least two separate washing systems, each having a separate closable washing container, is detected separately for each washing system, and the energy/water consumption is rated on the basis of the amount of energy and water detected for each washing system. The invention also relates to dishwashers provided with at least two separate washing systems, each having a separate closable washing container, in which the energy and water consumption is detected and rated according to the inventive method in order to optimize the energy/water consumption rating.
