Abstract (en)

[origin: WO03053210A1] Disclosed is a movement reversal device, especially for a dishwasher comprising a washing receptacle which is provided with at least two spraying devices impinging upon goods to be washed that are disposed in the washing receptacle by means of fluid transported via a circulating pump. Said transported fluid flows through a movement reversal device comprising at least two outlets for feeding different spraying devices with the fluid. Said outlets can be opened or closed in such a way by means of a positioning element that one or several or all outlets are open or closed one after another and/or continuously. In order to produce the inventive movement reversal device in such a way that the actions of the electronically regulated revolution speed of the circulating pump can be replaced in a simple manner, whereby the disadvantages known in prior art are overcome, the positioning element (21, 21') is provided with at least one opening (22) with a diameter that is different from the diameter of at least one other opening (23, 24).
