Abstract (en)
[origin: WO03051319A1] The invention relates to cleaning products and methods for the production thereof, based on microemulsions that contain oil. These products are aesthetic, can also be foamed and can be used as shower gels, shampoos, cleansing preparations, handwashing products, bath preparations, make-up removers or shaving products. The products can be of low viscosity or gel-like, can slightly or highly foam and/or used as antibacterial rinse-off formulations. The cleaning products are very mild on the skin and aesthetically transparent. The microemulsions can serve as an impregnation medium for towels and fabrics that are used either wet or dry by the user. In addition, the microemulsions can be applied from a pump foamer.
