Abstract (en)  
[origin: WO03051328A1] A solid pharmaceutical composition for parenteral administration comprising an inner matrix comprising at least one therapeutic agent, and a biodegradable, and water-impermeable coating covering part of the surface of said composition, wherein said inner matrix disintegrates upon contact with animal tissue or tissue fluids. The coating is made from a material selected from the group consisting of polyesters such as polyglycolides, polylactides and polylactic polyglycolic acid copolymers (PLGA) etc. The innermatrix may comprise a binder, e.g. mannitol, and the active agent may comprise insulin.
