Abstract (en)
[origin: WO03051932A1] The invention relates to polyisobutenyl derivatives of succinic acid, obtainable by: i) reacting a polyisobutene with maleic acid or maleic anhydride, said polyisobutene having a reactive terminal group content of at least 80 %, its molecular weight distribution being characterized by a maximum MP of the distribution curve in the range of from 500 to 20000 daltons and a ratio of weight average molecular weight to number average molecular weight MW/MN of less than 1.4; ii) reacting the polyisobutene-succinic acid derivative obtained in i) with at least one compound (I) that has at least one primary or secondary amino group and/or one OH group, while forming an amide or ester compound. The invention also relates to a method for the production and to the use thereof as an additive in lubricant compositions.
