Abstract (en)  
[origin: WO03055994A1] The invention concerns an isolated HXHV virus having the following characteristics: (i) a DNA genome, at least partly single-stranded; (ii) said genome comprises at least an open reading frame (ORF) encoding a protein or a polyprotein; (iii) said genome comprises a nucleotide sequence having, for each segment of at least 40 nucleotides belonging to said sequence, at least 90 % homology with SEQ ID NO: 1 or with its complementary sequence. The invention also concerns a nucleic material and a peptide material and their uses.
