Abstract (en)

[origin: WO03054451A1] The invention relates to a securing device for a filter element (3), which can be detachably mounted on a extractor hood (1). The securing device has a connecting implement (8) for detachably connecting the filter element (3) to the assigned extractor hood (1), whereby the connecting implement (8) catches the filter element (3) when detaching it from the extractor hood (1) while preventing it from falling down. To this end, the connecting implement (8) has a fixing element (10) with a rod-like section (12) and with a thickening (13) connected thereto, and has a closure element (11) with a U-shaped slot (16), whereby the rod-like section (12) of the fixing element (10) is formed so that it fits the U-shaped slot of the closure element (11). .
