Abstract (en)

[origin: WO03053119A1] The present invention relates to a shielding element for electric and/or electronic components of an electric and/or electronic circuit, comprising an annular side wall (11) for surrounding those elements (25) of a circuit that have to be shielded against electromagnetic radiation, said side wall (11) defining a bottom and a ceiling opening (15), and a cover (12, 12') for closing the ceiling opening (15). To provide a shielding element that facilitates a sampling of an electric and/or electronic circuit arrangement said cover (12, 12') is either - detachable attached to said side wall (11) by joint means that comprises a predetermined breaking (26) line, or - defined together with said annular side wall (11) as parts of an integral cap (23) by a predetermined breaking line (26). In both cases said predetermined breaking line (26) has to be destroyed for detaching said cover (12, 12') from said side wall (11).
