Abstract (en)
[origin: EP1459650A1] The combination of back panel (3) and lateral parts (4) of the unit is created by folding the lateral parts (4) into four layers provided with a vertically positioned row of diagonal slots (11). The upper ends of two stands (6), accommodated with their lower ends in a base (12), can be inserted into the space between the layers from below. Each of the boards (2) is folded along predetermined lines in order to create elevated front and lateral borders (9) as well as flaps (10) at the rear of the lateral borders (9) for being inserted into the appropriate slots (11).
