Abstract (en)

[origin: WO03049947A2] The invention relates to methods for detecting the force exerted by actuators and to devices for optimally using said forces to regulate a pressure force exerted by at least one cylinder upon another cylinder in a printing machine and/or to place/remove at least one of said cylinders, wherein the first cylinder is mounted in a cylinder holder which is in turn mounted in a frame holder, wherein at least two actuators are arranged between the cylinder holder and the frame holder, said actuators exerting a radial force upon the cylinder holder when actuated by a control signal.
