Abstract (en)  
A control device for refrigerating apparatus comprises a regulation block (30) to regulate a power delivered to a heating element connectable with a powering unit (20) through an input section (10) and with said heating element (110) of a refrigerating apparatus (100) through an output section (11); the regulation block (30) is provided with a thyristor (40) and a connecting branch (50). The connecting branch (50) defines a conductive path between a first end (41) and an auxiliary input (43) of said thyristor (40). <IMAGE>
