Abstract (en)
[origin: US7299937B2] A device for closing a container and a container equipped with such a device, wherein the device includes: a first portion forming a closure element; a second annular portion positioned around a neck; a third portion forming a tamper-evident tab linking the first portion to the second portion, and which is connected to the first and second portions by frangible means so that the tamper-evident tab must be removed upon first use so as to release the closure element; and storage means for allowing the insertion of the tamper-evident tab therein once the tamper-evident tab has been separated from the first and second portions.
