Abstract (en)
[origin: WO03050016A1] A device is described for sorting of waste into different fractions, which device includes at least two throw-in columns consisting of throw-in pipes (5) with openings (6), which throw-in pipes (5) are connected to a plate shaped lid (4), a waste container (12) for each throw-in pipe (5) arranged on a plate shaped body (11), which waste containers (12) in the normal position of use of the device are provided in an underground tank or chamber (1), and a centrally placed lifting/lowering device (3, 8, 10) for raising the waste containers (12) up to ground level for the removal of these from the device.
