Abstract (en)
[origin: WO03016653A1] The invention concerns a foil dispenser (1) wherein a support tube (3) houses a foil roll (4). The first end (5) of the support tube (3) is releasably retained on a framework rafter (2) by an end post (11), whereon is articulated the support tube (3) along a transverse axis of rotation (10), and provided with a lower crosspiece (14). The support tube (3) further supports a clamping leg (12) and a support leg (15). When the support tube (3) is parallel to the rafter (2) the foil dispenser (1) pinches the rafter (2) between its clamping leg (12) and the lower crosspiece (14), while the support leg (15) is simply supported on the upper side of the rafter (2). The user can simply pivot (9) the support tube (3) to space apart the clamping leg (12) from the lower crosspiece (14) and release the foil dispenser (1) relative to the rafter (2).
