Abstract (en)
[origin: EP1462150A1] The device has a base body with several units for supporting a user, at least one of which can be moved by foot, hand or other parts of the body, and an additional vibration function. Each supporting unit (2-5) has a separate component (6-9) that interacts with the associated body part, that is joined to the other parts of the unit by at least one damping element (10,11) and that is subjected to a vibration motion.
