Abstract (en)

[origin: EP1462253A2] The bearing and coupling device is for a cylinder (6). It has two rotary bearings (4, 5), once for each end region (10, 11) of the cylinder. At least one of the rotary bearings can be axially displaced for the fitting or removal of the cylinder. At least one of the bearings may be fitted co-axially to a holding device (24) by means of a screw device (25).
