Abstract (en)
[origin: EP1462409A1] The elevating platform has a lifting plate (3) for the lifting of loads, and a Bowden cable (20) with an inner cable (21) and an outer conduit (25). The outer conduit is fastened by its first end (26) to the lifting plate, and the inner cable by its first end (22) to a fixed point. The elevating platform also has a drive to exert an extension force on the inner cable and/or to exert a compressive force on the outer conduit in order to raise the lifting plate. The second end (27) of the outer conduit is fastened to a fixed point. An independent claim is included for a passenger lift with the proposed elevating platform.
