Abstract (en)
[origin: EP1462601A2] The door has a door panel (2) comprising multiple sections (3, 3') connected with one another in articulated manner. A weight equalization device (4) is configured as a torsion spring connected with a bottom section of the door panel. An electrical door drive (5) coupled to the door panel opens and closes movement of the door panel. A driven impeller engages in a guide rail and moves the door panel along the rails.
