Abstract (en)

[origin: WO03057577A1] The invention relates to a method for producing a combined packing container (28), comprising a plastic beaker-shaped interior part (15) and a jacket-type exterior part (14) that surrounds the plastic interior part (15) and is held in a locked manner against the external face of the plastic interior part (15). According to said method, the two parts (14, 15) are stacked one inside the other in a locking manner. To improve the assembly process, the exterior part (14) is retained in a receptacle (13) and the plastic interior part (15) is inserted into the exterior part (14) that is retained in said receptacle (13), and is subsequently pushed into the exterior part (14) in a locking manner.
