Abstract (en)

A soft binding for a snowboard is described, operable to secure a soft boot to a board for snowboard, including: an angularly adjustable base plate (14), for coupling to a graduated disc (12) secured to the board whereby it can be fixed thereon at a predetermined angle to the longitudinal axis of the board, and a variable-configuration seat (16) for engagement of a boot, for coupling to the top of the plate (14) and including a front portion (18a) and a rear portion (18b) each slidable longitudinally with respect to the base plate (14) so as to vary the length of the aforesaid seat (16) so as to accommodate boots of different sizes, the said portions (18a, 18b) being fixable to the plate (14) at a plurality of predetermined relative positions.
