Abstract (en)
A mechanism for guiding a tool (4) includes two stiff arm elements (5, 8) connected by hinges (6, 9) to a wall support (1) attached to a wall (2) and by hinges (7, 10) to a tool support (3) assembly for carrying the tool. The arm elements and the supports form a parallelogram allowing the tool to be displaced always taking the same angle to the vertical. For protecting the body of an operator and making the operation of the mechanism easy, the second arm includes a portion (11) that at least partly encloses a portion of the first arm. The enclosing portion has a small extension in a direction between the two arms, this also making the mechanism compact. <IMAGE>
