Abstract (en)

A sheet processing system is disclosed comprising a cyclable buffering member and a method for controlling such system. When a time-consuming finishing treatment is to be performed on a sheet or a set of sheets, in order to gain the time required to enable the execution of the time-consuming finishing treatment, the sheet processing system is controlled such that sheets arriving at the endless surface of the buffering member during the execution of the finishing treatment are temporarily assembled in superimposed relationship on the continuously cycling buffering member.
