Abstract (en)

[origin: EP1464773A1] A spacer in a construction element (1) comprises an inner thread (5) provided in the construction element (1), a spacer screw and a support foot (6). The spacer screw has a thread for cooperation with the inner thread (5). The support foot (6) is intended for abutment against a support surface. The distance between the support foot (6) and the construction element (1) is adjustable by rotation of the spacer screw. The support foot (6) has a first engagement means (9) by means of which it is fixable in the construction element (1). The spacer screw and the support foot (6) have mutually corresponding engagement means by means of which the spacer screw is fixable in or on the support foot (6) and the first engagement means of the support foot (6) is releasable from the construction element (1). <IMAGE>
