Abstract (en)

[origin: EP1464836A2] The device (10) has a swivel plate (107) pivotable relative to and driven by a drive shaft (104) and joined to a sliding sleeve (108) and a supporting element (109), whereby the pistons have linkage arrangements with which the swivel plate is in sliding engagement. The linkage connection (116) between the drive shaft and swivel plate is essentially only for torque transfer and the supporting element is essentially only for axial support of the piston and/or gas pressure.
