Abstract (en)

[origin: EP1464916A1] The coupling device transmits information and ignition energy between a firing system (5) and ammunition comprising a pyrotechnic unit (1) placed against a support surface (3) of a breech block (4) belonging to the firing system. A first part of the coupling (8) is housed in the breech block surface and a second part (9) is located in the pyrotechnic unit. An independent claim is included for a decoy system comprising a coupling device.
