Abstract (en)

[origin: WO03059129A1] Structure 5 to hang flower pots 6 onto balcony railings and the like comprising a cage 8 containing minimum one flower pot 6 to be hooked onto the handrail and adjusting means 16 to adapt the distance of the pot from the railing the peculiarity of this structure lays in the fact that the adjusting means 16 comprise at least one distance element 17 inserted in a preformed recess 21 in the pot. The invention resolves the inconvenience found in the known structures, as it permits, on the one hand, to effect a very simple adjustment of the pot distance from the railing and, on the other hand, to reduce the production costs to a minimum because it is neither necessary to use systems equipped with screws and the like, nor to make complicated moulds forming rectangular flower pots.
