Abstract (en)
[origin: WO03035473A1] The invention relates to a demonstration device for powerless flying devices and, in particular, flying sport devices such as jumping skis (9) or parasails and for bird-human costumes (20, 23). The inventive device has the following features: a suspending device (11) for the individual(s), which holds the individual(s) in a position that would be assumed during an actual flight using the respective flying device, and; a support (30, 31, 32) that is connected to the suspending device in such a manner that the trajectory of the individual(s) located in the suspending device is essentially determined by the movement of the support and not by the flying device connected to the individual(s).
