Abstract (en)  
[origin: WO03060305A1] The invention relates to an actuator with an electromotor drive. Said drive swivels, via a reduction gear (2), a toothed segment stationarily mounted on a shaft from a first position, limited by a first stop (17), to a second position, limited by a second stop (18). The toothed segment can be swiveled to the one and to the other swivel position of the toothed segment relative to the shaft by a limited swivel angle against a spring force.
