Abstract (en)

[origin: FR2833748A1] The invention concerns amplifying microwave operating tubes. The electronic tube comprises: a pumping tip (50) for producing vacuum inside the tube; an electron gun (11) emitting an electron beam (12) inside the tube; a collector (14) directly collecting one first part of the electron beam (12). The pumping tip (50) directly repels a second part of the electron beam (12) towards the collector (14).

[origin: FR2833748A1] The simplified electron tube collector has a vacuum pump tube (50) and an electron gun emitting electrons inside the tube. A collector collects part of the electron beam. A second part of the electron beam is redirected in the collector direction by the pump tube.
