Abstract (en)

[origin: EP1466732A2] The printing machine may handle paper or plastics sheets (14) on a continuous web. It has an ink (114) drying system with clusters of lamps (10) producing visible and IR (infrared) light (12) to heat and harden the ink. Each drying station follows printing (110) and counter-pressure (112) rollers applying individual colors of inks. The paper or plastics sheets move quickly from the printing station (18) to the drying station (116).
