Abstract (en)

[origin: EP1466835A2] The invention relates to a stopcock for a container neck, comprising valve means with a pushbutton (1) suitable for being moved between open and closed positions of a liquid delivery passage. Said valve means comprises, further to said pushbutton (1), a seating member (3) provided with a mouth, adapted to be attached to said neck. Between said seating member (3) and said pushbutton (1) there is defined an interstitial space (5) wherein there is housed a resilient member (6) ensuring the return of the pushbutton (1) to the closed position thereof, at the same time as it ensures the opening and closing of the liquid delivery passage thanks to ports and to hermetic stoppering means of said interstitial space (5).
