Abstract (en)
[origin: EP1466856A2] The travelling crane has a superstructure (2) rotatable around a vertical axis (8) and which supports a jib with lifting means, a bottom structure (4) with a tracked running gear, and a support unit (3) which has several liftable and lowerable support feet. Both the superstructure and the bottom structure are rotatable relative to the support unit around a vertical axis (8,19). The superstructure and support unit are rotatable independent of each other relative to the bottom structure by means of separate rotational connections.
