Abstract (en)
[origin: EP1467139A2] The arrangement has at least one linear light source (1) essentially fully within a light conductor (3) and at least two reflectors (2) at the light outlet openings (16) of the light conductor for bounding the angular range of radiation. There are at least two reflectors on one side of the light source at different distances and arranged so that their main beam direction is essentially perpendicular to the longitudinal direction of the linear light source.
