Abstract (en)  
The invention relates to a fireplace comprising a core (2) with a firebox (3), and a shell (1) arranged at a distance from the core in such a manner that there is a space (5) between the core and shell. So that in conventional batch-type burning, the fireplace was be able to emit heat to its surroundings more uniformly and heat emission continued longer than in the prior art fireplaces, heat regulation means (4) are arranged in the space (5) between the core (2) and shell (1) to control the amount of radiation heat transmitted from the surface of the core towards the inner surface of the shell.
