Abstract (en)

[origin: EP1467334A2] Traffic control method for a road network in which drivers are influenced using traffic influencing elements in order to implement a particular traffic strategy. Onboard traffic influencing elements comprise navigation systems for guiding drivers to target destinations from start destinations. The suggested routes are transmitted to a driver from a central route suggesting system. An independent claim is made for a system for influencing drivers in a road network by provision of routes to drivers based on start and destination locations.
