Abstract (en)
[origin: WO03059787A1] The invention concerns a device for dividing a receptacle into compartments for sorting, arranged on the opening of the receptacle and designed to maintain at least an open bag, comprising a crosspiece consisting of at least two telescopic elements (1, 2) formed by profiled sections with matching shape to ensure that they slide with longitudinal guidance, the profiled section forming each element consisting of a body having a part with large cross-section (4, 10) which is mounted on a part with narrower cross-section (5, 11) at the base of which is provided, forming a single piece therewith, on its two sides and over its entire length, means for catching and locking the bags to be maintained.
