Abstract (en)
[origin: WO03060562A2] The invention relates to holding device for placing at least one optical component (3) in front of a laser light source (5) of a laser unit (1), comprising a first holding part (8) to which the at least one optical component (3) is fastened. The holding device (2) also comprises a second holding part (9), which is fastened to a part of the laser unit (1), whereby the first holding part (8) is fastened to the second holding part (9). The invention also relates to a method for producing a system of this type.
