Abstract (en)

[origin: WO03063456A1] The invention relates to a method for the transmission of voice/data signals between a base device (1) such as a telephone terminal, for example, and a secondary device (2) such as a computer, digital reader/recorder or an intermediate device (3) such as a transceiver, especially a Bluetooth transceiver, with the aid of a connection (4), said secondary device or intermediate device (3) comprising at least one charge battery (5) for supplying electricity thereto, characterized in that said connection (4) has two operating modes: a first mode wherein the charge battery (5) can be charged and voice/data signals can be transmitted, and a second mode wherein only voice/data signals can be transmitted. The invention also relates to a connection (4) for carrying out said method, and a secondary device (2) or intermediate device (3) comprising a connection (4) in order to carry out said method.
