Abstract (en)

[origin: EP1468949A1] The device has a transport mechanism for the material band and a tear-off mechanism with at least two pressure elements (24,26) on opposite sides of the material path, of which at least one can be applied to the material band by an application device with at least one motor (60) and a controller (43) for time control of the motor for applying the pressure element at a controllable point in time.
