Abstract (en)

[origin: EP1469149A1] The device has a stress sensor (6) coupled to a handle (5) for receiving stress provided on the handle. The handle movably linked to a base plate (4) is actuated in an opening direction (Fb) or an opposite direction (Fa), to control opening or closing of a vehicle door. The sensor produces detection signals when the handle is actuated in either of the opening or opposite directions.
